

**Brief description and notes (economic contribution if provided)**

The Tongji University International Construction Festival will take place at the College of Architecture and Urban Planning of Tongji University. Participating teams include Student from the College of Architecture and Urban Planning, College of Design and Innovation, and College of Civil Engineering at Tongji University, as well as student teams from China's architectural colleges, and from architectural colleges in the US, Europe, and Asia. The goal is to collaborate for design and construct a pavilion made by the material provided (e.g. in 2024 the pavilions were made by plastic polypropylene sheets)

The construction workshop will conclude with the award ceremony the final day. The construction site is ABC Square at the College of Architecture and Urban Planning, Tongji University. Selected projects from this year's construction festival will be considered with the possibility of being implemented.

Moreover, according with the previous editions, the participating design team needs to set a specific environment between urban and rural areas, such as towns, villages, fields, hills, forests, etc., as the location of the building. In combination with the design intention they need to use the specific material properties to design and construct. At the same time, they need to express the relationship between the structure and the site environment in the design drawings.
